

# Addition Lead Service Line Replacement Information

Figure of a Typical Water Service

### Service Line Material Verification Test

1. Find the water meter on your property.
2. Look for the pipe that comes through the outside wall of your home and connects to your meter.
3. Use a key or coin to gently scratch the pipe (like you would scratch a lottery ticket).
4. Place a magnet on the pipe to see if it sticks to the pipe.
5. Determine your service line pipe material per the following table:

Appearance	Magnet Sticks	Service Pipe Material	Photo
Dull brown on the outside, but will be the color of a bright penny where scratched	No	Copper	
Dull and soft, but will turn shiny silver where scratched	No	Lead	
Scratched area remains dull gray	Yes	Galvanized Steel
